County-to-County Migration

The following county-to-county migration flow estimates are based on the 2013 American Community Survey (ACS) 5-year estimates. The ACS program combines yearly datasets from 2009 through 2013 to increase the sample size and provide reliable estimates for smaller areas. While the data is collected over a five-year span, the estimates provided represent one year of migration. This data set lags the current ACS by one year.

The report also includes additional characteristics related to the ability to speak English, place of birth, and years in the United States. The universe for “ability to speak English” is the population aged 5 and older while the universe for the other characteristics is 1 year and older. Due to suppression, some characteristic data may not sum to other totals.

The dataset includes persons that migrate from other countries to the United States but not migrants to foreign countries. World regions are shown in the detailed list of in-migrants, however, there are not corresponding figures in the detailed list of out-migrants, or are they included in net migration calculations.
